DESCRIPTORS: \*Steel, \*Bonding, Adhesives, Stainless

The results of the investigations show that a successful  
adhesive bonding of steel is feasible. The knowledge  
and experiences gained in aluminum-bonding are  
applicable. However, different characteristics of  
material and other application procedures will add new  
factors. For example, the spraying with blasting  
corundum by the "Vacu-Blast" method can be regarded  
as a most effective pretreatment of adherend surfaces.
